## Assignments

This chapter contains the details and binding information about the two data analysis assignments that comprise the portfolio upon which your course grade is based.

Below, you can find a brief idea of what each assignment will cover.

- For each assignment, you will use R to analyze some real-world data, and you will write up your results in a concise report (not a full research paper).
  - Guidelines for these analyses/reports are delineated in the following two sections.
  - You will submit your reports via Brightspace.
- You will complete Assignment 1 in the *Assignment Group* that you join on Brightspace.
- You will complete the second assignment individually.
- The first assignment is graded as pass/fail.
  - You must pass this first assignment to pass the course.
- Your grade on the second assignment constitutes your numeric course grade.
